

RULE 4

Draft Application

THE LBI DYNASTY RULE 4 DRAFT APP IS A LIGHT-WEIGHT APPLICATION DESIGNED TO INTEGRATE SEAMLESSLY WITH THE MLB RULE 4 DRAFT IN REAL TIME WHILE LEVERAGING THE AMATEUR SCOUTING DATA YOU ALREADY HAVE.

LBI Dynasty has developed a sleek, standalone web application that will take the amateur scouting data that your club has captured and allow you to search, filter and compare players to make the best selection available to the organization round after round. With a very minimal amount of data extracted from your own internal scouting applications you can plug into the LBI Dynasty Draft App. LBI has been developing custom scouting applications for baseball teams for the better part of a decade and we have encountered all different permutations of Scouting Evaluations, Statistics and Preference Lists. We've used that knowledge to build a powerful data mining tool that will help make you the best decisions for the players still left on the board.

Benefits of using the LBI Dynasty Draft App:

- ★ **Ease of Use** — *A simple extract is all that is needed to get started*
- ★ **Fully Customizable** — *Include Statistics, Preference List or any other player data your club feels is important in player selection*
- ★ **Interactive** — *Real time integration during the MLB Rule 4 Amateur Player Draft*
- ★ **No Distractions** — *No need to have other applications open during the draft; all of the information your organization has been collecting can be consolidated into this application*
- ★ **Bonus Calculation** — *Keep track of each organization's bonus pool as selections are made*
- ★ **Preparation** — *Pre-rank your organization's top targets in the draft queue in preparation for the draft*
- ★ **Analysis** — *Use the dynamic draft boards to compare the remaining players in the draft*
- ★ **Video Integration** — *Easily integrate video that the scouting department has accumulated to watch in the app*

REAL TIME INTEGRATION WITH THE AMATEUR PLAYER DRAFT AND AUTOMATIC PLAYER REMOVAL FROM YOUR ANALYSIS

ALL OF THE INFORMATION NEEDED TO MAKE THE BEST PLAYER SELECTION POSSIBLE CONSOLIDATED INTO ONE PIECE OF SOFTWARE

The draft board will allow your club to rank players (both during and prior to the draft) in the draft queue as well as see the remaining available players that have yet to be ranked. As players are drafted their draft magnets are immediately removed.

Integrate the MLB Rule 4 Amateur Player draft results with the organization's rankings of remaining players with the ability to hide and show drafted players.

The application header will always keep your team up-to-date on the recently drafted players and when your next draft selection is, with the ability to jump to any round. As players are drafted the header will transition from the organization that owned the pick to the information about the player selected. Additionally the organization's bonus pool will be adjusted as a result of the selection. Estimated bonus amounts for the players can either be supplied as metadata prior to the draft, to be used in an automatic calculation, or you can data enter the estimated signing bonus as players are selected to keep track of the bonus information.

Dynasty
LB1 RULE 4 AMATEUR PLAYER DRAFT APP
v 1.2

Using an easy to use wizard you can add as many draft boards as necessary to sort, filter and analyze players

The research board will allow your organization to customize the data that is available for analysis. For instance, a club may opt to include player statistics, signability information, preference lists or other necessary information to assist in finding the next diamond in the rough. The application will also allow note taking on the players in the draft that can be used in post draft analysis or preparation for future drafts. The notes feature will include '@' annotations to link players, scouts or agents together as well as '#' hash tags to allow for searching on topics either during or following the draft. Video integration is crucial for player evaluations for the draft. The application will support many sources for video, including CLIPS, other API's (internal to the organization or external) or any other video that the club has access to.

The LBi Dynasty Draft Application will help your organization make the best draft selections possible based on all of the hard work performed by the amateur scouting department. The application is a web application designed to work on any device or screen size and will seamlessly integrate with the MLB Rule 4 Amateur Player Draft in real time with little to no information needed from your organization. Player rankings will be kept in sync with the remaining players in the draft while keeping an eye on your remaining bonus pool. Watch video of players to help make last minute player evaluations prior to a selection. Take notes on players to allow for post draft analysis as well as build up a notes database for future drafts.
